

How to apply software upgrade to my existing iVA?

Quick Start Guide

There are three software upgrades available for the iVA:

- PIM Finder software: **iVA-SW-FI-A**
- Channel Power Mode software: **iVA-SW-CPA**
- Transmission Mode software: **iVA-SW-TMA**

The following steps outline how to apply a software upgrade to an existing iVA.

STEP 1: Log into Kaelus Unify Cloud at <https://www.kaelusunify.com/login> and register the iVA.

Note: if you do not have a Kaelus Unify account yet, you will need to create one.

You can create an account by clicking this link: <https://www.kaelus.com/en/test-measurement-solutions/kaelus-unify/kaelus-unify-portal>

Once the iVA is added, you should see the newly purchased Software Mode on the Device screen.

The three software modes are shown on the screen below as an example.

STEP 2: Launch the Kaelus Unify App on your device (computer or tablet)

You must be logged into the Kaelus Unify App with the same Kaelus Unify account.

Ensure that the device with the Kaelus Unify App is connected to the internet.

Wait a few minutes for the changes to propagate through.

You should see the icon of the newly purchased software mode appear on the device menu of the Kaelus Unify app.

Your newly purchased software is now ready for you to use!
