TWIN SAME BAND COMBINER 850 B-BAND

Designed to combine two 850MHz base stations, the Kaelus DBC0135 provides a low loss combiner with excellent insertion loss and passive inter-modulation performance.

FEATURES

- Combines UMTS with single 5MHz LTE carrier
- Extremely close (zero guardband) spacing
- Designed for low passive inter-modulation
- DC/AISG autosensing
- Low insertion loss

DC / AISG

The DC/AISG path is automatically selected. In bottom of the tower applications (combiner mode), each RF channel port is sequentially checked for the presence of DC voltage. If more than one port has voltage, the port that has the highest (programmed) priority is passed to the common port. If a short circuit is detected on the common port DC/AISG is disabled. In top-of-tower applications (splitter mode), DC/AISG is passed to all ports that do not present a short circuit. If a short circuit is detected, the shorted RF port will be disabled for DC/AISG while other RF ports remain connected.
